

What questions do you have for physics and music that you hope will be answered during the course?

What physics and music questions do you have?

How does music enter human culture?

How do we differentiate music and sound?

Is there a physical basis for how we perceive "sad" or "majestic" sound?

Do animals react to music similarly to humans?

How do room acoustics can contribute to overall sound?

Harmonic frequencies?

How can sound be transmitted from one planet to another?

How are sound waves converted to light waves for filmstrips?

Do animals produce multiple pitches simultaneously?

How would you convey to extraterrestrials what music is?

How can physics help with music composition to make it better?

Is there physics basis for the symbolic meanings associated with sounds in classical music?
